

## # Recommender

![Films](foto1.png)

## ## Description

A basic Film Recommender. From an already generated database in csv with

- users
- films
- score of the films

the user can interact and navigate this data base consulting it, modifying or adding information. The main focus is then, to give a recommendation of a given user based on the similarity that this user has with the other users.

Possibilities of the code:

```
```java
System.out.println("\nOptions: addMovie, addUser,
deleteUser, addRating, "
+ "changeRating, deleteRating, getRecommendation,
showUsers, showMovies, showAllRatings, "
+ "showUserRatings, showMovieRatings exit ");
```
```

## ## Installation

Used software:

- 1) IntelliJ IDEA 26.1
- 2) Data Model based on CSV Files

## ## Instructions

- 1) In RecommenderApp Class: compile
- 2) select option through command line
